

## Mayo Clinic Student Diversity Programs

Wayne State University School of Medicine distinguishes itself as a leading academic institution with a strong commitment to diversity. Mayo Clinic shares that commitment to diversity.

To address the number of minorities progressing into clinical research and academic medicine, Mayo Clinic has developed several integrated programs to provide minority students an added edge. The goals of the programs are to provide medical students early exposure to clinical care experiences, an introduction to basic science/patient-oriented research, and opportunities to participate in career development workshops. To ensure these programs are accessible to all students, travel expenses, meals, and housing are covered or a generous living stipend is made available (depending on the program).

The Mayo Clinic Student Diversity Programs are opportunities that we are certain you will want to share with students at Wayne State University School of Medicine. To directly access program information and our on-line applications, please direct students to: <http://www.mayo.edu/msgme/diversity.html>.

We would greatly appreciate you forwarding the list of opportunities to diverse medical students at your institution.

We appreciate your support of these Mayo programs. We look forward to continuing our collaboration and affording diverse groups of students these unique opportunities. Thank you.

Respectfully,

Dennis Mays, PhD  
Program Manger  
College of Medicine Office for Diversity
